Pilot Operated Regulator AR425 to 935 Series

Standard Specifications

Model	AR425	AR435	AR625	AR635	AR825	AR835	AR925	AR935	
Port size	1/4, 3/8, 1/2		3/4, 1		1 1/4, 11/2		2		
Fluid	Air								
Proof pressure	1.5 MPa								
Max. operating pressure	1.0 MPa								
Set pressure range (MPa) (1)	0.05 to 0.83	05 to 0.83 0.02 to 0.2 0.05 to 0.83 0.02 to 0.2 0.05 to 0.83 0.02 to 0.2		0.02 to 0.2	0.05 to 0.83	0.02 to 0.2			
Air consumption (for bleed hole) (2)	5 L/min (ANR) (at maximum pressure)								
Pressure gauge port size	1/4								
Ambient and fluid temperature	-5 to 60°C (No freezing)								
Construction	Internal pilot relieving type (Pilot air is always bleeding.)								
Weight (kg)	0.	7	1.	.1	2.	5	4.5		

Note 1) Outlet pressure range: P2 is 90% of P1 or less.

Note 2) Air consumption differs depending on the set pressure. Due to the construction, the pressure gap between inlet and outlet cannot be set within 0.03 MPa, even if the knob is set at the maximum.

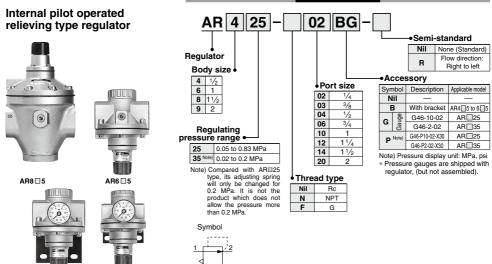

Accessory (Option)/Part No.

	Part no.							
Description Model	AR4 🗆 5	AR6 🛛 5	AR8 🛛 5	AR9 5				
Bracket	B24P	B25P		_				
Pressure gauge with limit indicator Note 1)	G46-10-III (Max. 1.0 MPa), G46-2-III (Max. 0.2 MPa)							

Note 1) • In the gauge part no. (e.g. G46-10-□02), □ indicate kind of the connecting thread. Put nothing for Rc and "N" for NPT thread. • Please consult with SMC for NPT pressure gauge.

Note 2) Use caution not to tighten excessively when mounting a pressure gauge, otherwise it may result in a breakdown. Use a sealant tape for sealing.

Pilot Operated Regulator AR425 to 935 Series

AR425 to 935 Series

Construction

When knob (1) is turned clockwise to compress pressure adjustment spring (8). the pressure from the IN side passes through diaphragm (1), opens pilot valve 12, and enters upper pilot chamber 13. This pressure and the force generated by pressure adjustment spring (8) act as resistance, resulting in equilibrium. Then, this pressure passes through diaphragm 6 of the main valve and stem 14, and pushes valve (main valve) ⑦ open, thus auiding the pressure to the OUT side. At the same time, the pressure passes through feedback hole (15), and enters diaphragm chamber 16, thus establishing the OUT side pressure (outlet pressure).

Component Parts

No.	Description	Material	Note
1	Body	Aluminum die-casted *	Platinum silver painted
2	Bonnet	Aluminum die-casted	Platinum silver painted

10	Knob	ABS	1	13414							

Note) Diaphragm is included.

▲ Precautions

Be sure to read this before handling I the products. Refer to page 9 for safety instructions and pages 13 to 17 for precautions on every series.

Mounting/Adjustment

∆Warning

- 1. Install the valve guide (on the opposite side of the knob) 60 mm away from the ground surface to facilitate maintenance inspection.
- Do not use the regulator with flow exceeding the Max. flow indicated in "Flow Rate Characteristics" as this can cause failure in pressure adjustment.

▲Caution

 Release the lock to adjust the pressure. After the adjustment, engage the lock. Failure to observe this procedure could damage the knob or cause the outlet pressure to fluctuate.

<Lock operating method> Loosen the knob locking screw to un-

lock it, and tighten it to lock it. 2. Please contact SMC if this product is to

 Please contact SMC if this product is to be used between solenoid valve and actuator.

Selection

∆Caution

 When operating at an inlet pressure lower than the inlet pressure used in the flow rate characteristics graph, the pressure drop on the outlet side may be greater. Therefore, be sure to conduct testing using the actual equipment. For pressure control equipment selection, refer to the "Product Selection Guide."

Dimensions

* For products with pressure gauge, pressure gauges are shipped together with product.
